Easy and Fast
Application with **AirBed**
Inflating Kits

Inflate – Pack - Dispatch

AirBed is delivered to you in non-inflated way so that it does not occupy much space during transport and storage and so that it can be shipped more cost-effectively.

When you need **AirBed**, you can prepare it for use by simply inflating it with a mini compressor or hand pump.

You can easily inflate **AirBed** up to 0.8 bar pressure value with any sources of air besides mini compressor and hand pump which are available in our stocks.

AirBed Inflating Kits

MINI COMPRESSOR

Air Suction	Max Bar	Volt	Continuous Duty Time
42 l/min	0,8 Bar	220 V	2,3 Hours

HOSE GUN SET

Felix Spiral Hose 7,5 m

Pneumatic connection sleeves

Air Gun

HAND PUMP

Plastic Hand Pump is an ideal solution as it is economic as well as ergonomic for companies which do not have intensive packaging operations or which have multiple packaging stations.

Transport of Products in Box

AirBed provides you with maximum protection when you transport your fragile items in boxes.

This is mostly preferred by food and beverage sectors. You can ship any desired quantities of items in boxes by using **AirBed** that can be produced according to the sizes of your boxes. It will be sufficient that you share with us your box sample and product characteristics for **AirBed** that can be produced according to the sizes of your boxes.

Furniture

AirBed, which you can use for packing and shipping your furniture, is a product in a sheet form with column diameter of 40mm and 60mm.

You can obtain **AirBed** as roll in order to ship your furnitures with very sensitive surface in a safe way. You can cut the roll in any sizes that you need, and inflate it with mini compressor easily and ensure maximum protection. You can also obtain **AirBed** in pre-sized sheets for your furnitures.

AirBed Special Application Examples

Transportation

AirBed, which has 60 mm column size can be used as an air cushion during your palletized consignments, provides maximum protection against possible impacts and crashes during shipment.

This is mostly used in container shipments. You can get **AirBed** in the form of roll, cut it according to your pallet size and then inflate and use it. As the columns are independent of each other; if the air of one column gets deflated, it does not affect the whole protection.

Elektronik

You can use it for the packing and shipping of your electronic items and increase protection ratio of your items with optimum protection.

Your choice of **AirBed** products that are manufactured with column diameters 20 – 30 – 40 and 60 mm will determine your protection ratio. As the thickness of air cushion that wraps the item rises when the column diameter increases, your items will be protected much better.

It will be sufficient for us to determine the optimum column size and prepare the most appropriate sample for you, if you provide us your product to be packed.

1) Do we need any equipment when we use **AirBed?**

You can easily inflate our products with a hand pump or a simple air compressor according to usage frequency.

2) After inflating **AirBed, how long does the air stay inside?**

Generally, the air stays inside for minimum 1 year. Even if a little air is lost, this does not affect the performance of the product.

3) Is there any minimum order quantity for **AirBed?**

You can purchase our standard AirBed products in box quantities.

4) How long would it take to inflate an **AirBed?**

You can quickly inflate AirBed within 3 to 4 seconds.

5) Can I try AirBed without purchasing it?

We can provide you free samples for your products

6) Is AirBed resistant to moisture and steam?

Yes

7) Can we get printing on **AirBed?**

Yes, this is possible with minimum order quantity.

8) Can I use AirBed in air cargo?

Yes

9) Is **AirBed recyclable?**

Yes, it is 100% recyclable.

Frequently Asked Questions

- 10)** Can **AirBed** be produced in special sizes?
Yes, but production process has certain limitations. So, please contact us for your special needs.
- 11)** What are the advantages of **AirBed** when compared to alternative packaging materials?
AirBed saves you up by preventing possible damages thanks to its superior protection performance. In addition it reduces your warehouse and transportation cost. You can save up to 90% with your warehouse storage.
- 12)** How is it possible to adjust the air pressure of **AirBed**?
It is inflated up to the maximum inflation level by using the hand pump. When inflating it with air gun, the maximum air pressure of compressor must be 0,8 bars.
- 13)** What is the difference of **AirBed** from other inflatable packaging products?
AirBed is made out of high-quality raw material by using the state-of-the-art technology.
- 14)** Why should I use **AirBed** instead of EPS?
In brief, EPS occupies too much space and is not an environment-friendly product.
- 15)** Can AirBed be re-inflated and used again?
It is not possible to deflate an already-inflated product. You can keep it as inflated and use it again.
- 16)** What happens if any of the air columns of **AirBed** get damaged?
In case of a failure in any of the column, the other columns are not affected and continue to provide protection.
