

POLLY BUBBLE MAILER

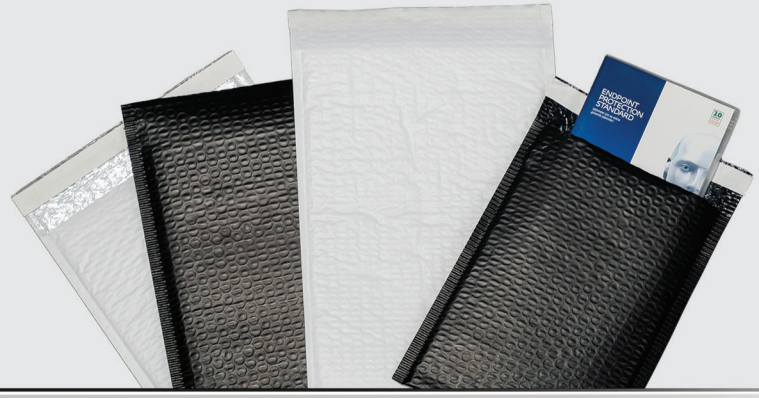

The poly bubble mailer is an economical yet effective packaging solution that keeps the content safe from damages during shipments in an environmentally friendly way.

PRODUCT PAGE

POLLY BUBBLE MAILER

The poly bubble mailer consists of a multilayer blend of PE plastic film on the outer layer with a bubble film on the inside. The poly bubble mailer is made from 35% of recycled material and 10% of post-consumer waste which makes it an eco-friendly and sustainable packaging solution.

Self-adhesive sealing is the way to ensure the security and privacy of your shipments. Once the envelope is sealed it leaves a visible sign of tampering. Another feature is that the poly bubble mailers are waterproof and tear-resistant providing a high level of protection. The opaque outer layer keeps the content confidential and the smooth surface makes writing and labelling possible.

Bubble film lined interior of the mailer is an economic alternative to standard packaging and will help to ensure content safety. The poly bubble mailer has lightweight properties and prevents an exaggerated increase in the shipping cost.

Features:

- 35% of recycled material and 10% of post-consumer waste.
- Recyclable
- Effective damage protection
- Keeps content confidential
- Tamper evident closure to ensure content security
- Printable and writable outer surface
- Waterproof, moisture-proof, tearproof and tamper-resistant
